

828 GRILL

ZIP 1 Design Language — Targeted Upgrade Prompt

Apply to existing Next.js build (Site 3 + ZIP 2 merge)

This prompt instructs Z.ai to apply specific design upgrades sourced from the ZIP 1 (Arena) build. ZIP 1 has the strongest editorial design language of the three: left-aligned hero with Bebas Neue at full scale, a more functional navbar layout, superior card design with category labels overlaid on images, tighter copy, and a cleaner menu page. Paste this entire prompt into Z.ai after completing the previous merge build.

CONTEXT — What ZIP 1 Does Better

You have already completed the Site 3 + ZIP 2 merge build. The following upgrades apply specific design patterns from a third reference build (ZIP 1) that have been identified as superior to what is currently in the merged site. Apply each upgrade precisely. Do not change anything not mentioned below.

ZIP 1 Design Strengths to Port

- Hero layout: left-aligned, not centered — stronger editorial weight and scan direction
- Bebas Neue used at true display scale (10rem+) not constrained to mid-size headings
- Eyebrow copy above hero headline uses letter-spacing: 0.38em in orange monospace
- Single primary CTA "ORDER NOW" — no competing ghost button in the hero
- Navbar: functional right-side grouping with CART count, SIGN IN, and CHECKOUT clearly separated
- Menu section labelled "HOUSE HEAT" with "MENU REVEAL" eyebrow — more distinctive than "FAN FAVORITES"
- Card design: category label overlaid bottom-left of image in orange all-caps tracking-wide
- Card ADD TO CART button uses ghost/outline style (border only, no fill) — less heavy than solid
- "SMOKE, SEAR, SEND IT." brand statement section — best copy of the three builds
- Menu page headline "THE MENU" at massive scale (text-8xl or larger)
- Filter tabs right-aligned on menu page, not left or center
- Footer: minimal two-column — brand left, links right — no address clutter on homepage footer

UPGRADE 1 — Typography Scale — Apply Bebas Neue at True Display Scale

The current build uses Bebas Neue but constrains it. ZIP 1 uses it at full editorial scale. Apply these exact size classes to the corresponding elements:

globals.css or tailwind.config — confirm Bebas Neue is loaded

```
/* Confirm this is in your globals.css */
@import url('https://fonts.googleapis.com/css2?family=Bebas+Neue&family=Inter:wght@400;500;600;700;800;900&display=swap');

/* Font utility class */
.font-display {
  font-family: 'Bebas Neue', Impact, sans-serif;
  letter-spacing: 0.045em;
}
```

Eyebrow / Label text above headings

Apply this pattern to all section eyebrows (the small orange label above big headings):

```
/* Eyebrow style */
.className="font-mono text-xs uppercase tracking-[0.38em] text-[#E8531A]"

/* Examples: "ASHEVILLE HEAT. BUILT TO ORDER." / "MENU REVEAL" / "THE CRAFT" / "ORDER ONLINE" */
```

Hero headline — use left-aligned layout at maximum scale

The hero headline in ZIP 1 stacks the brand name and tagline vertically on the left, not centered. This reads with more authority. Update the hero section:

```
/* Hero content — left-aligned, NOT centered */
<div className="relative z-10 mx-auto w-full max-w-7xl">
  <div className="max-w-4xl hero-copy">

    {/* Eyebrow */}
    <p className="mb-4 font-mono text-sm uppercase tracking-[0.38em] text-[#E8531A]">
      Asheville heat. Built to order.
    </p>

    {/* Brand name at maximum Bebas Neue scale */}
    <h1 className="font-display text-[6rem] leading-[0.85] tracking-[0.04em]
      text-[#F5F0E8] sm:text-[8rem] lg:text-[11rem]">
      828 GRILL
    </h1>

    {/* Tagline — secondary display */}
    <h2 className="mt-4 font-display text-[2.8rem] leading-none
      tracking-[0.04em] text-[#F5F0E8]/90 sm:text-[4rem] lg:text-[5rem]">
      Fire-built burgers for serious appetites.
    </h2>

    {/* Body */}
    <p className="mt-6 max-w-xl text-base leading-8 text-[#F5F0E8]/70 sm:text-lg">
      Dark-char sears, smoky sauces, and hot-off-the-grill combos
      made for pickup or delivery.
    </p>

    {/* Single CTA — no ghost button competing */}
    <button
      onClick={scrollToMenu}
```

```

      className="ember-button mt-8 px-8 py-4 text-sm font-extrabold
        uppercase tracking-[0.22em] text-white">
        Order Now
      </button>
    </div>
  </div>

```

UPGRADE 2 — Navbar — Functional Right-Side Action Group

ZIP 1 has the clearest navbar of all three builds. The right side shows CART with live count in an outlined box, SIGN IN as plain text, and CHECKOUT as a solid orange button. This is more functional and scannable than the current layout. Update the Navbar component:

FILE: components/Navbar.tsx — desktop right-side actions

```

/* Replace the right-side action group with this */
<div className="flex items-center gap-3">

  {/* Cart with count — outlined box */}
  <Link href="/cart"
    className="flex items-center gap-2 border border-white/20 px-4 py-2
      text-xs font-bold uppercase tracking-[0.18em] text-[#F5F0E8]
      hover:border-[#E8531A]/60 hover:text-[#E8531A] transition-all">
    <ShoppingBag className="w-4 h-4" />
    Cart
    <span className="font-mono text-[#E8531A]">{itemCount}</span>
  </Link>

  {/* Sign In — plain text link */}
  {isAuthenticated ? (
    <Link href="/account"
      className="text-xs font-bold uppercase tracking-[0.18em]
        text-[#888] hover:text-[#F5F0E8] transition-colors">
      Account
    </Link>
  ) : (
    <Link href="/auth/login"
      className="text-xs font-bold uppercase tracking-[0.18em]
        text-[#888] hover:text-[#F5F0E8] transition-colors">
      Sign In
    </Link>
  )}

  {/* Checkout — solid orange button, always visible */}
  <Link href={isAuthenticated ? '/checkout' : '/auth/login'}
    className="bg-[#E8531A] hover:bg-[#E8531A]/90 px-5 py-2.5 text-xs
      font-extrabold uppercase tracking-[0.18em] text-white
      transition-all hover:shadow-lg hover:shadow-[#E8531A]/25">
    Checkout
  </Link>
</div>

```

UPGRADE 3 — Home Featured Section — "HOUSE HEAT" with Card Redesign

Replace the current "FAN FAVORITES" / "SIGNATURE PICKS" section heading with "HOUSE HEAT" and apply the ZIP 1 card design. The key difference is the category label overlaid on the image and the ghost-style ADD TO CART button.

Section heading update — in app/page.tsx

```
/* Replace whatever heading is above the featured cards with: */
<div className="mb-12 max-w-3xl">
  <p className="font-mono text-sm uppercase tracking-[0.32em] text-[#E8531A]">
    Menu reveal
  </p>
  <h2 className="mt-3 font-display text-[5rem] leading-none
    text-[#F5F0E8] sm:text-[7rem]">
    House Heat
  </h2>
  <p className="mt-4 text-lg leading-8 text-[#888888]">
    Start with the signatures, then build the cart your way.
  </p>
</div>
```

MenuItemCard redesign — components/MenuItemCard.tsx

The ZIP 1 card has the category label overlaid INSIDE the image at the bottom-left, price shown next to the item name (not on the image), and a ghost outline ADD TO CART button instead of a solid one. Update the full component:

FILE: components/MenuItemCard.tsx — full replacement

```
'use client';
import { useState } from 'react';
import Image from 'next/image';
import { useCartStore } from '@store/cart';
import { MenuItem } from '@data/menu';

export default function MenuItemCard({ item }: { item: MenuItem }) {
  const addItem = useCartStore(s => s.addItem);
  const [added, setAdded] = useState(false);

  const handleAdd = () => {
    addItem({
      menuItemId: item.id,
      name: item.name,
      price: item.price,
      imageUrl: item.imageUrl,
    });
    setAdded(true);
    setTimeout(() => setAdded(false), 1200);
  };

  return (
    <article className="group flex flex-col overflow-hidden bg-[#1A1A1A]
      transition duration-500 hover:-translate-y-1 hover:bg-[#211814]
      border border-white/5 hover:border-[#E8531A]/25">

      {/* Image with category overlay */}
```

```

<div className="relative h-52 overflow-hidden">
  <Image
    src={item.imageUrl}
    alt={item.name}
    fill
    className="object-cover opacity-90 transition duration-700
      group-hover:scale-105 group-hover:opacity-100"
  />
  {/* Gradient from bottom */}
  <div className="absolute inset-0 bg-gradient-to-t
    from-[#0D0D0D]/80 via-transparent to-transparent" />

  {/* Category label – overlaid bottom-left of image */}
  <div className="absolute bottom-3 left-4 font-mono text-xs
    uppercase tracking-[0.26em] text-[#E8531A]">
    {item.category}
  </div>
</div>

{/* Card body */}
<div className="flex flex-1 flex-col p-5">

  {/* Name + price row */}
  <div className="flex items-start justify-between gap-4">
    <h3 className="font-display text-[2.2rem] leading-none
      text-[#F5F0E8]">
      {item.name}
    </h3>
    <p className="font-mono text-lg text-[#E8531A] flex-shrink-0">
      ${item.price.toFixed(2)}
    </p>
  </div>

  {/* Description */}
  <p className="mt-4 flex-1 text-sm leading-6 text-[#888888]">
    {item.description}
  </p>

  {/* Ghost outline Add to Cart button */}
  <button
    type="button"
    onClick={handleAdd}
    className={`mt-6 border px-4 py-3 text-sm font-extrabold
      uppercase tracking-[0.18em] transition-all
      ${added
        ? 'border-green-500/50 bg-green-500/10 text-green-400'
        : 'border-[#E8531A]/50 text-[#F5F0E8] hover:border-[#E8531A] hover:bg-[#E8531A] hover:text-white'
      }`}
    {added ? 'Added' : 'Add to Cart'}
  </button>
</div>
</article>
);
}

```

UPGRADE 4 — Add "SMOKE, SEAR, SEND IT." Brand Statement Section

ZIP 1 has a two-column brand statement section that does not exist in the current merged build. It is the best copy of the three builds and must be added to the home page between the featured cards and the bottom CTA. Add this section in `app/page.tsx`:

ADD TO `app/page.tsx` — insert after featured cards section

```
<section className="border-y border-white/10 bg-[#1A1A1A]/40
  px-4 py-24 sm:px-6 lg:px-8">
  <div className="mx-auto grid max-w-7xl gap-12
    lg:grid-cols-[0.9fr_1.1fr] lg:items-center">

    <div>
      <p className="font-mono text-sm uppercase tracking-[0.32em]
        text-[#E8531A]">
        The craft
      </p>
      <h2 className="mt-3 font-display text-[4.5rem] leading-none
        text-[#F5F0E8] sm:text-[6rem] lg:text-[7rem]">
        Smoke, Sear, Send It.
      </h2>
    </div>

    <p className="text-xl leading-9 text-[#F5F0E8]/70">
      828 Grill keeps the menu focused: burgers with real char, sides that
      can hold their own, and combos that move fast from grill to checkout.
      The experience is designed to feel as direct as the food: choose,
      cart, pay, confirm.
    </p>
  </div>
</section>
```

UPGRADE 5 — Menu Page — "THE MENU" at Maximum Scale + Right-Aligned Filters

ZIP 1 uses "THE MENU" at massive Bebas Neue scale with the filter tabs right-aligned on the same row as the description. This is more editorial than the current stacked layout. Update `app/menu/page.tsx`:

UPDATE: `app/menu/page.tsx` — header section only

```
/* Replace the existing menu page header with: */

<div className="bg-[#141414] border-b border-white/5">
  <div className="max-w-7xl mx-auto px-4 sm:px-6 lg:px-8 py-16 sm:py-20">

    <p className="font-mono text-sm uppercase tracking-[0.32em]
      text-[#E8531A] mb-3">
      Order online
    </p>

    <div className="flex flex-col justify-between gap-8 lg:flex-row
      lg:items-end">

      {/* Left: Heading + description */}
```

```

<div className="max-w-2xl">
  <h1 className="font-display text-[6rem] leading-none
    text-[#F5F0E8] sm:text-[8rem] lg:text-[9rem]">
    The Menu
  </h1>
  <p className="mt-4 text-lg leading-8 text-[#888888]">
    Filter by category, add to cart, and continue to the checkout flow.
  </p>
</div>

{/* Right: Filter tabs — right-aligned on desktop */}
<div className="flex flex-wrap gap-2 lg:justify-end">
  {categories.map(cat => (
    <button
      key={cat}
      onClick={() => setActive(cat)}
      className={`border px-5 py-3 text-xs font-extrabold uppercase
        tracking-[0.18em] transition-all
        ${active === cat
          ? 'border-[#E8531A] bg-[#E8531A] text-white'
          : 'border-white/15 text-[#F5F0E8]/70 hover:border-[#E8531A]/60 hover:text-[#E8531A]'
        }`}
      {cat}
    </button>
  ))}
</div>
</div>
</div>
</div>

```

UPGRADE 6 — Bottom CTA Section — "READY FOR FIRE?" Editorial Layout

ZIP 1 uses a clean two-column CTA at the bottom of the home page: large left-aligned headline + sub-copy on the left, single orange button right-aligned. Replace the current bottom CTA with:

UPDATE: app/page.tsx — bottom CTA section

```

<section className="px-4 py-24 sm:px-6 lg:px-8">
  <div className="mx-auto flex max-w-7xl flex-col items-start
    justify-between gap-8 sm:flex-row sm:items-end">

    <div className="max-w-3xl">
      <h2 className="font-display text-[4.5rem] leading-none
        text-[#F5F0E8] sm:text-[6rem] lg:text-[7rem]">
        Ready for fire?
      </h2>
      <p className="mt-4 text-lg text-[#888888]">
        Browse the full 828 Grill menu and checkout in minutes.
      </p>
    </div>

    <Link
      href="/menu"
      className="ember-button px-8 py-4 text-sm font-extrabold

```

```

      uppercase tracking-[0.22em] text-white flex-shrink-0">
    Full Menu
  </Link>
</div>
</section>

```

UPGRADE 7 — Footer — Minimal Two-Column (Brand Left, Links Right)

ZIP 1 has the leanest footer: brand name and tagline on the left, just three links on the right. No address block, no hours column. The homepage footer should be minimal. The address/hours belong on a Contact page or the Menu page.

Update components/Footer.tsx:

FILE: components/Footer.tsx – full replacement

```

'use client';
import Link from 'next/link';

export default function Footer() {
  return (
    <footer className="bg-[#0D0D0D] border-t border-white/5 mt-auto">
      <div className="max-w-7xl mx-auto px-4 sm:px-6 lg:px-8 py-10">
        <div className="flex flex-col sm:flex-row items-start justify-between gap-8">

          {/* Brand */}
          <div>
            <Link href="/">
              <span className="font-display text-3xl text-[#F5F0E8]">
                828 <span className="text-[#E8531A]">GRILL</span>
              </span>
            </Link>
            <p className="mt-2 text-sm text-[#888] max-w-xs leading-relaxed">
              Dark grill-house ordering for 828 Grill LLC.
            </p>
          </div>

          {/* Right links */}
          <div className="flex items-center gap-8">
            <Link href="/menu"
              className="text-xs font-bold uppercase tracking-[0.18em]
                text-[#888] hover:text-[#E8531A] transition-colors">
              Menu
            </Link>
            <Link href="/cart"
              className="text-xs font-bold uppercase tracking-[0.18em]
                text-[#888] hover:text-[#E8531A] transition-colors">
              Cart
            </Link>
            <a href="https://instagram.com/828grill"
              target="_blank" rel="noopener noreferrer"
              className="text-xs font-bold uppercase tracking-[0.18em]
                text-[#888] hover:text-[#E8531A] transition-colors">
              @828grill
            </a>
          </div>
        </div>
      </div>
    </footer>
  );
}

```

```

        </div>
    </div>

    { /* Bottom rule + copyright */ }
    <div className="mt-10 pt-6 border-t border-white/5
        flex flex-col sm:flex-row items-center justify-between gap-3">
        <p className="text-[#888] text-xs">
            &copy; 2026 828 Grill LLC. All rights reserved.
        </p>
        <p className="text-[#888] text-xs">
            EST. 828 &middot; CRAFTED WITH FIRE
        </p>
    </div>
</div>
</footer>
);
}

```

UPGRADE 8 — CSS Additions — Ember Button, Hero Animation, Scroll Reveal

ZIP 1 has polished micro-animations that are not in the current merged build: the ember button shimmer sweep, hero copy rise-in, hero photo slow zoom, and scroll-reveal for sections. Add these to globals.css:

ADD TO: app/globals.css

```

/* ■■ Ember button with shimmer sweep ■■ */
.ember-button {
  position: relative;
  isolation: isolate;
  overflow: hidden;
  background: #E8531A;
  box-shadow: 0 0 36px rgba(232, 83, 26, 0.28);
  transition: transform 220ms ease, box-shadow 220ms ease;
}

.ember-button::before {
  position: absolute;
  inset: 0;
  z-index: -1;
  content: '';
  background: linear-gradient(
    110deg,
    transparent 0%,
    rgba(255, 255, 255, 0.22) 45%,
    transparent 72%
  );
  transform: translateX(-115%);
  animation: ember-sweep 3.6s ease-in-out infinite;
}

.ember-button:hover {
  transform: translateY(-2px);
  box-shadow: 0 0 56px rgba(232, 83, 26, 0.42);
}

```

```

/* ■■ Hero animations ■■ */
.hero-photo {
  animation: ember-zoom 17s ease-in-out infinite alternate;
  transform-origin: center;
}

.hero-copy {
  animation: rise-in 900ms ease-out both;
}

/* ■■ Scroll reveal ■■ */
.reveal {
  opacity: 0;
  transform: translateY(28px);
  transition: opacity 700ms ease, transform 700ms ease;
}

.reveal-visible {
  opacity: 1;
  transform: translateY(0);
}

/* ■■ Keyframes ■■ */
@keyframes ember-zoom {
  from { transform: scale(1.05); }
  to { transform: scale(1.12) translate3d(1.5%, -1.2%, 0); }
}

@keyframes rise-in {
  from { opacity: 0; transform: translateY(34px); }
  to { opacity: 1; transform: translateY(0); }
}

@keyframes ember-sweep {
  0%, 55% { transform: translateX(-115%); }
  100% { transform: translateX(115%); }
}

/* ■■ Reduced motion respect ■■ */
@media (prefers-reduced-motion: reduce) {
  *, ::before, ::after {
    animation-duration: 0.001ms !important;
    animation-iteration-count: 1 !important;
    transition-duration: 0.001ms !important;
  }
}

```

Add a ScrollReveal wrapper component for sections:

FILE: components/ScrollReveal.tsx – IntersectionObserver reveal

```

'use client';
import { useEffect, useRef, useState, ReactNode } from 'react';

export default function Reveal({
  children,

```

```

    className = '',
  }: {
    children: ReactNode;
    className?: string;
  }) {
    const ref = useRef<HTMLDivElement>(null);
    const [visible, setVisible] = useState(false);

    useEffect(() => {
      const node = ref.current;
      if (!node) return;
      const observer = new IntersectionObserver(
        ([entry]) => {
          if (entry.isIntersecting) {
            setVisible(true);
            observer.disconnect();
          }
        },
        { threshold: 0.16 }
      );
      observer.observe(node);
      return () => observer.disconnect();
    }, []);

    return (
      <div
        ref={ref}
        className={` ${className} reveal ${visible ? 'reveal-visible' : ''} `>
        >
          {children}
        </div>
      );
    )
  }

```

Wrap each home page section in the Reveal component:

```

import Reveal from '@components/ScrollReveal';

/* Usage — wrap each section's inner content div */
<Reveal className="mx-auto max-w-7xl">
  { /* section content */ }
</Reveal>

```

UPGRADE 9 — Copy Upgrades — Replace Placeholder Text

Several text strings in the current build are placeholder or generic. Replace with the exact ZIP 1 copy which is tighter and more on-brand:

Hero eyebrow

Current: "EST. 2024 · MIAMI, FL"

Replace with: "Asheville heat. Built to order."

Hero headline

Current: "FIRE-KISSED FLAVORS" (centered)

Replace with: "828 GRILL" + "Fire-built burgers for serious appetites." (left-aligned)

Hero body copy

Current: "Where every burger is a masterpiece..."

Replace with: "Dark-char sears, smoky sauces, and hot-off-the-grill combos made for pickup or delivery."

Featured section eyebrow

Current: "CROWD FAVORITES" or "FAN FAVORITES"

Replace with: "Menu reveal"

Featured section heading

Current: "SIGNATURE PICKS" or "FAN FAVORITES"

Replace with: "House Heat"

Featured section sub

Current: "The ones that keep them coming back..."

Replace with: "Start with the signatures, then build the cart your way."

About/craft eyebrow

Current: "Our Craft" or "THE CRAFT"

Replace with: "The craft"

About/craft heading

Current: "BUILT ON FIRE" or "FORGED IN FIRE"

Replace with: "Smoke, Sear, Send It."

About/craft body

Current: long brand story paragraph

Replace with: "828 Grill keeps the menu focused: burgers with real char, sides that can hold their own, and combos that move fast from grill to checkout. The experience is designed to feel as direct as the food: choose, cart, pay, confirm."

Bottom CTA heading

Current: "YOUR NEXT MEAL STARTS HERE" or "Ready to eat?"

Replace with: "Ready for fire?"

Bottom CTA sub

Current: "Build your order in minutes..."

Replace with: "Browse the full 828 Grill menu and checkout in minutes."

Footer tagline

Current: "Fire-kissed flavors, crafted with passion..."

Replace with: "Dark grill-house ordering for 828 Grill LLC."

Stats section

Current: "50K+ Burgers Served / 4.9 Avg Rating / 24/7 Passion"

REMOVE entirely — these are placeholder numbers. Do not show unverified stats.

FINAL CHECKS

After applying all upgrades, verify:

✓ **Hero is left-aligned not centered**

The hero copy div should NOT have text-center or mx-auto centering on the text. It should align to the left inside the max-w-7xl container.

✓ **Bebas Neue reaches display scale**

The 828 GRILL headline should be at least text-[6rem] on mobile, scaling up to text-[11rem] on large screens. If it looks small, increase.

✓ **Category label appears inside card image**

The item category (BURGERS / SIDES / DRINKS / COMBOS) should appear overlaid on the image at the bottom-left, not below the image or in the card body.

✓ **ADD TO CART button is ghost/outline style**

The card CTA button should use border only with no background fill in its default state. Only fill on hover. Not a solid colored button at rest.

✓ **Smoke Sear Send It section exists on homepage**

There should be a two-column section between the featured cards and the bottom CTA that contains the Smoke Sear Send It headline and the craft body copy.

✓ **No fake stats on any page**

Remove 50K+ Burgers Served, 4.9 Avg Rating, and 24/7 Passion. These are placeholder numbers that undercut credibility with a real client.

✓ **ember-button class applied to all primary CTAs**

ORDER NOW, Full Menu, Add to Cart (hover), Checkout button, and all primary action buttons should use the ember-button class for the shimmer animation.

✓ **reveal class applied to all sections**

Wrap each home page section content in the Reveal component so elements fade and rise in as the user scrolls.

✓ **Footer is minimal two-column**

No address block or hours in the main footer. Brand + tagline left, three links right. Clean and uncluttered.
